

Robotic Tank Cleaning

“Ecocycle offers a Safe, Reliable, Efficient Solution for Tank Cleaning”

INSEE Ecocycle is a subsidiary of Siam City Cement Group. We offer sustainable solutions to a range of industries in various sectors. We believe in partnering with our customers and stakeholders to develop and deliver “peace-of-mind” waste management and industrial service solutions. Our mission is to earn respect and trust through safeguarding our customers’ reputations and improving their environmental footprint.

At INSEE Ecocycle, we are constantly looking to improve our performance, be it safety, technology or faster turnaround. This has led to our latest development in tank cleaning services. Our robust technology is able to significantly reduce downtime and the need for human entry into tanks.

Our crawler robot is ideal for cleaning in confined spaces during the sludge removal process. The main goal is to keep the operators at a safe distance from the risk zone, especially in ATEX Zone 0 areas but also in other conditions.

Benefits and Advantages

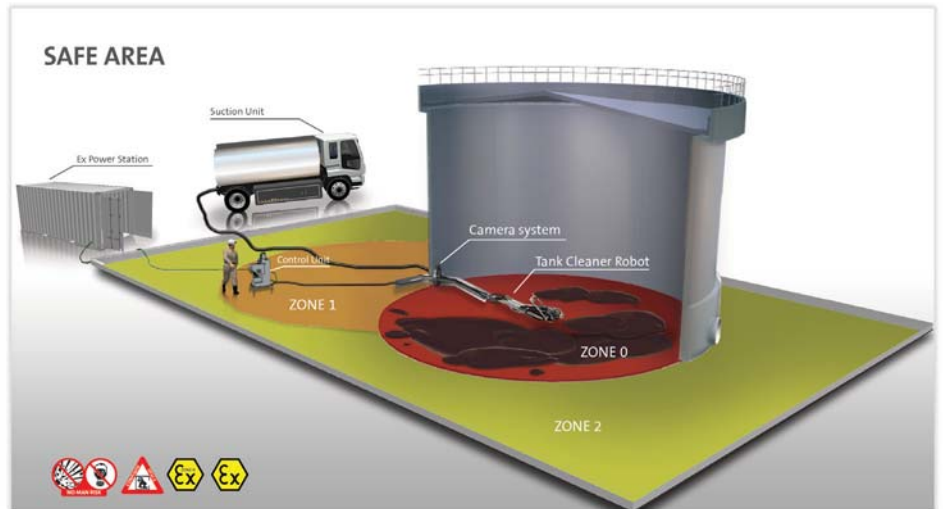

The benefits of the INSEE Ecocycle robotic tank cleaning program include:

SAFER OPERATIONS

- No-man entry, no personnel is inside the tank during sludge removal operation
- Operator in a safe area away from the tank
- Low safety risk, high productivity

REDUCED TANK DOWNTIME

- Quick start, simple operations within hazardous and limited spaces
- Accurate and precise interventions
- Uninterrupted operations

Our solutions

We've developed a robotic tank cleaning solution that offers best-in-class safety while speeding up the entire cleaning process. With the operation personal at a safe distance, the robotic tank cleaner easily navigates in the tank, sucking the difficult sludge. What's more, INSEE Ecocycle can handle not only the cleaning, but also the sludge removal, transportation of materials and final disposal. This makes our tank cleaning solution a seamless process that is both faster and safer than traditional methods.
